

ABIDS Visual Evidence Report

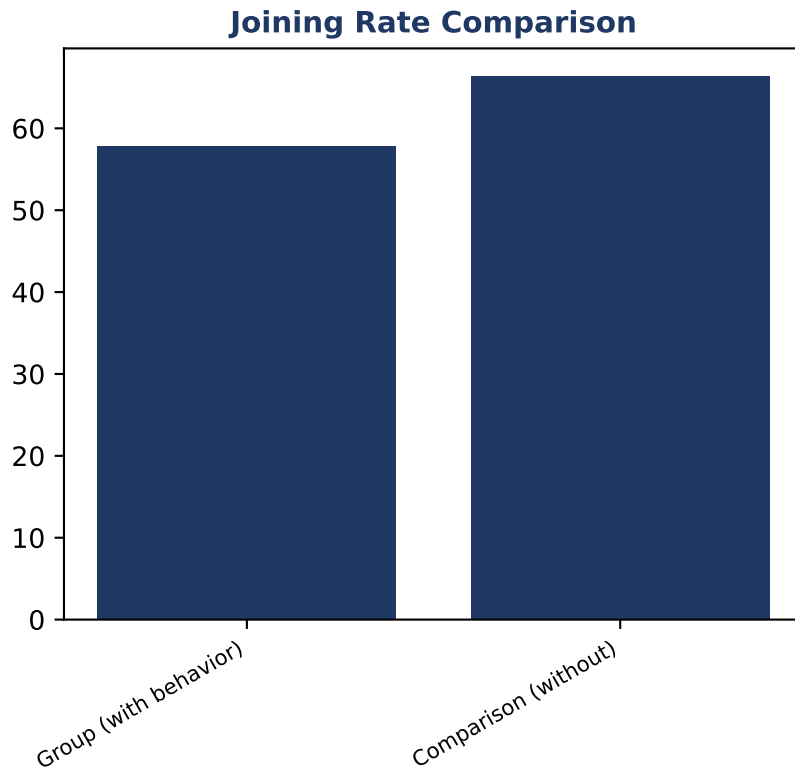

Every tested hypothesis, one visual card each

Demonstration dataset -- not real client historical data.

11 Hypotheses Tested	3 Supported	2 Weak
--	-----------------------------------	------------------------------

STATUS QUO BIAS

Hypothesis HYP-74e669469c7f

WEAK

Difference: -9% pts

Sample: n=199 vs n=1475

Effect size: 0.057 (Cramer's V)

CI: not computed for this test

Adjusted p-value: 0.0437

Interpretation:

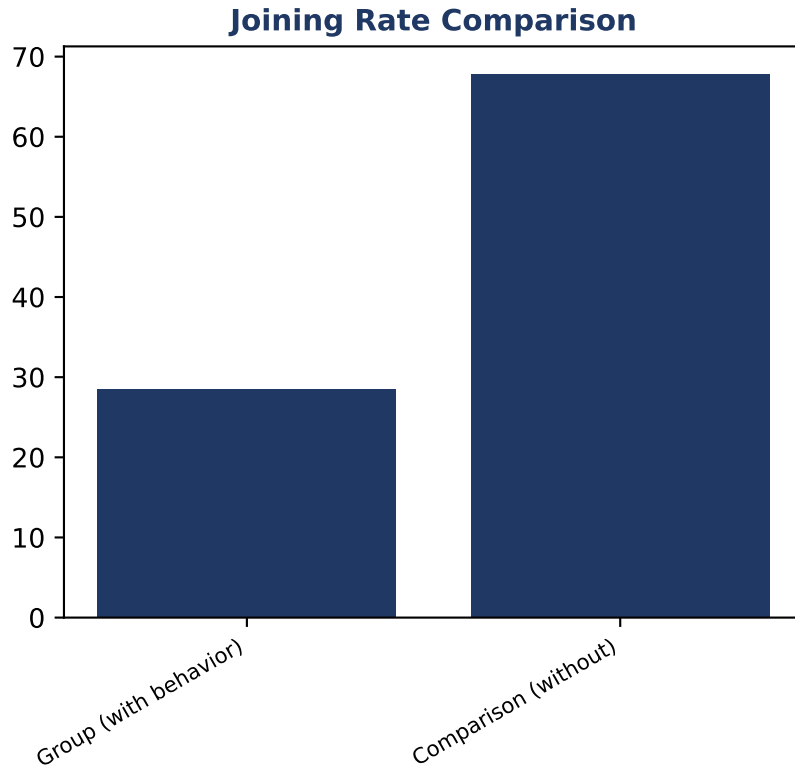

Applications with approved Status Quo Bias evidence showed a 58% joining rate, versus 66% for the comparison group, in the current analytical sample. Association only -- not a causal claim.

Limitation:

Association only, on demonstration data. Does not prove causation.

LOSS AVERSION

Hypothesis HYP-5674a4bf009b

Difference: -39% pts

Sample: n=105 vs n=1569

Effect size: 0.198 (Cramer's V)

CI: not computed for this test

Adjusted p-value: 0.0000

Interpretation:

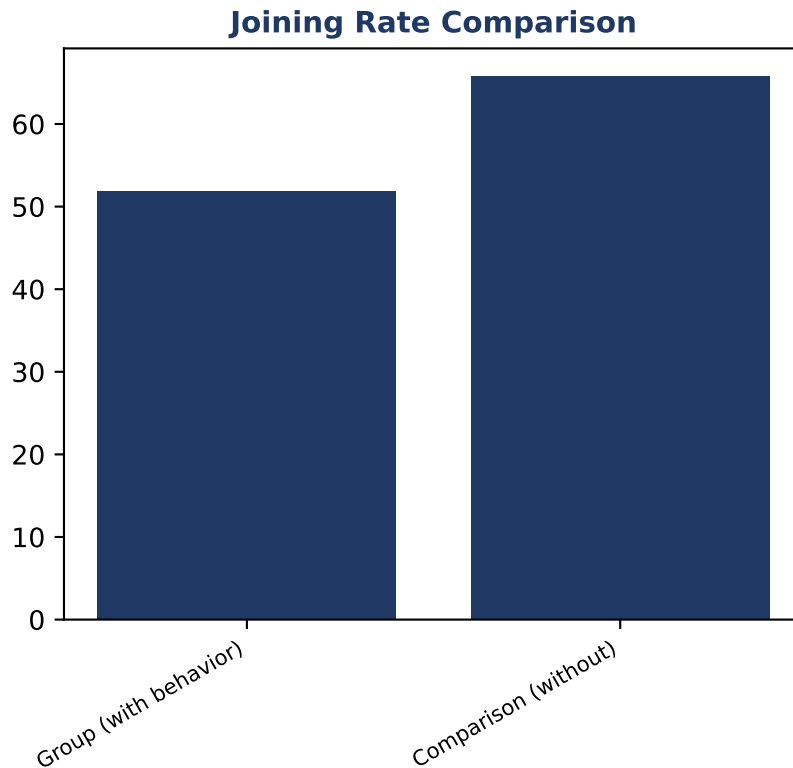

Applications with approved Loss Aversion evidence showed a 29% joining rate, versus 68% for the comparison group, in the current analytical sample. Association only -- not a causal claim.

Limitation:

Association only, on demonstration data. Does not prove causation.

CHOICE OVERLOAD

Hypothesis HYP-1d2e0d9f4f23

INCONCLUSIVE

Difference: -14% pts

Sample: n=54 vs n=1620

Effect size: 0.048 (Cramer's V)

CI: not computed for this test

Adjusted p-value: 0.0866

Interpretation:

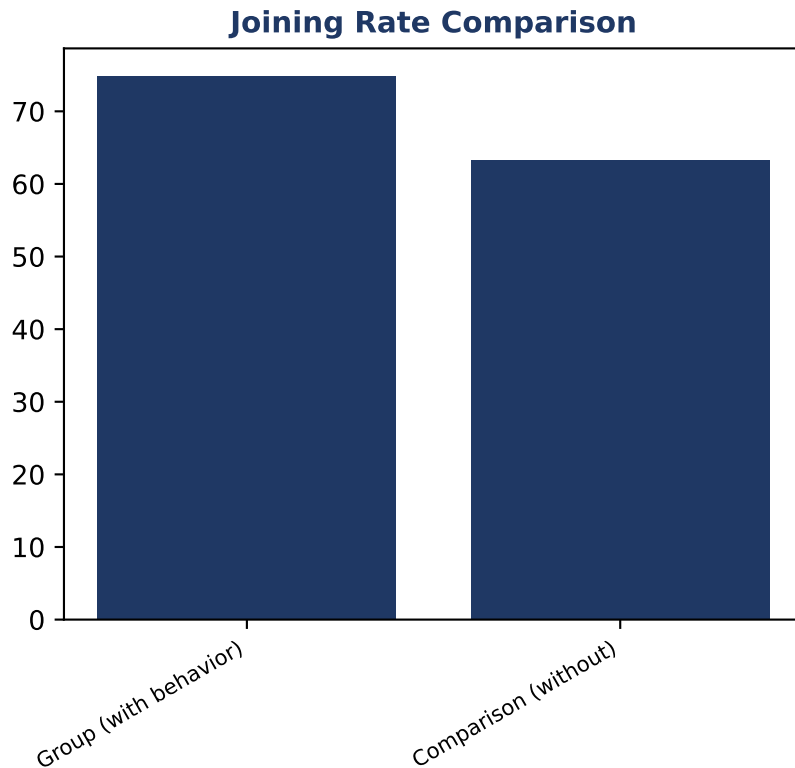

Applications with approved Choice Overload evidence showed a 52% joining rate, versus 66% for the comparison group, in the current analytical sample. Association only -- not a causal claim.

Limitation:

Association only, on demonstration data. Does not prove causation.

FRICION

Hypothesis HYP-69211be7ae96

WEAK

Difference: +12% pts

Sample: n=299 vs n=1375

Effect size: 0.092 (Cramer's V)

CI: not computed for this test

Adjusted p-value: 0.0005

Interpretation:

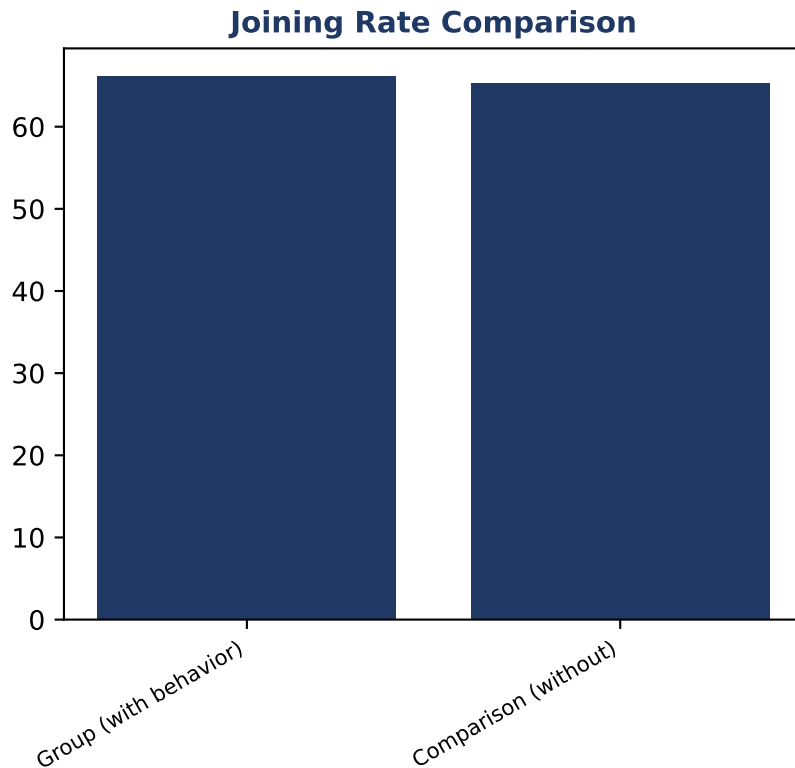

Applications with approved Friction evidence showed a 75% joining rate, versus 63% for the comparison group, in the current analytical sample. Association only -- not a causal claim.

Limitation:

Association only, on demonstration data. Does not prove causation.

RECIPROCITY

Hypothesis HYP-109c1918b704

INCONCLUSIVE

Difference: +1% pts

Sample: n=148 vs n=1526

Effect size: 0.003 (Cramer's V)

CI: not computed for this test

Adjusted p-value: 0.9006

Interpretation:

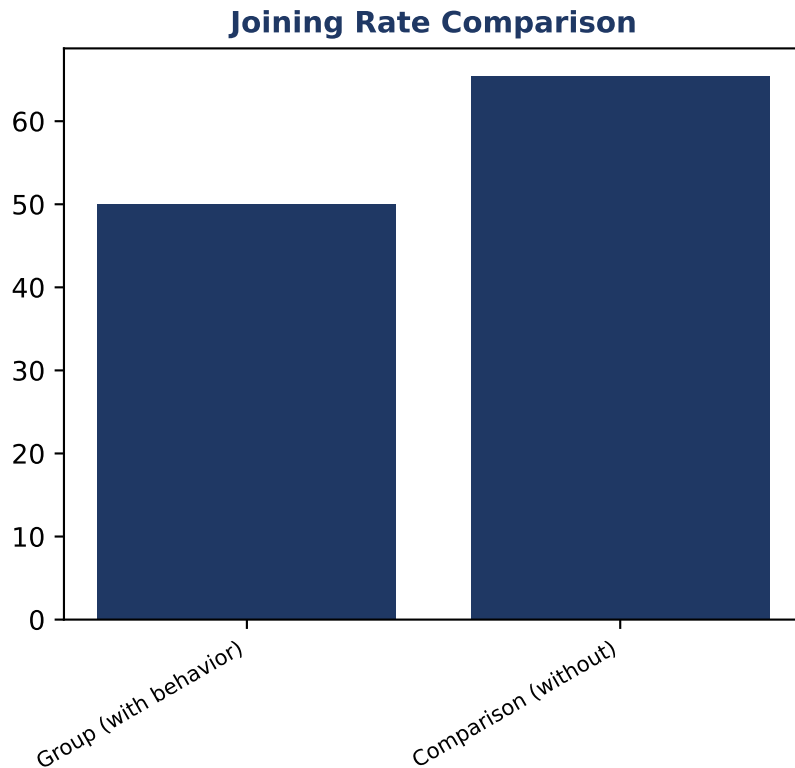

Applications with approved Reciprocity evidence showed a 66% joining rate, versus 65% for the comparison group, in the current analytical sample. Association only -- not a causal claim.

Limitation:

Association only, on demonstration data. Does not prove causation.

ANCHORING

Hypothesis HYP-ac061ebc8dd0

INCONCLUSIVE

Difference: -15% pts

Sample: n=8 vs n=1666

Effect size: 0.527 (odds ratio)

CI: see odds ratio

Adjusted p-value: 0.5611

Interpretation:

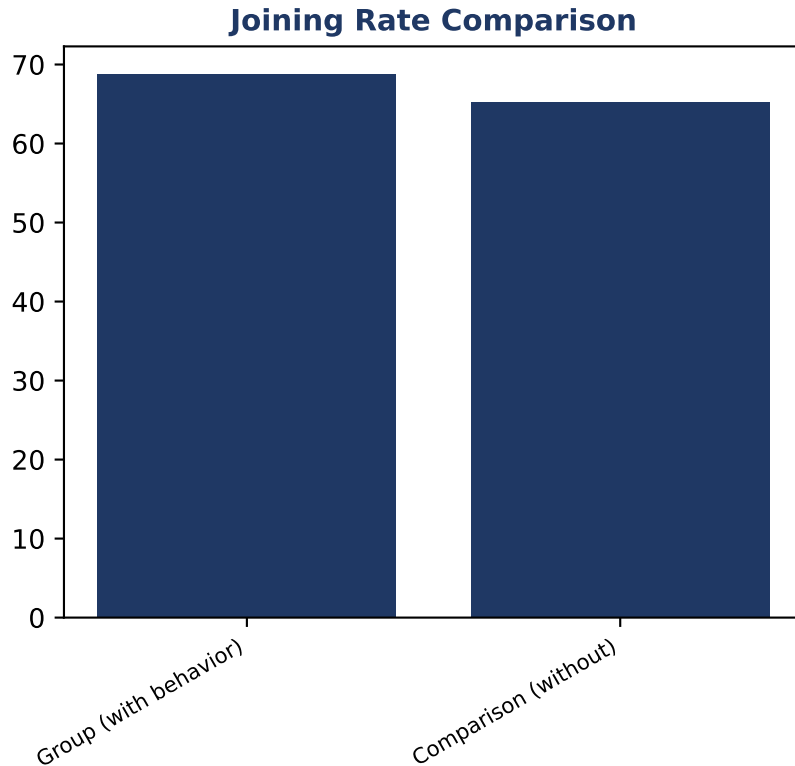

Applications with approved Anchoring evidence showed a 50% joining rate, versus 65% for the comparison group, in the current analytical sample. Association only -- not a causal claim.

Limitation:

Association only, on demonstration data. Does not prove causation.

CONFIRMATION BIAS

Hypothesis HYP-251cc0afecee

INCONCLUSIVE

Difference: +4% pts

Sample: n=61 vs n=1613

Effect size: 0.011 (Cramer's V)

CI: not computed for this test

Adjusted p-value: 0.7272

Interpretation:

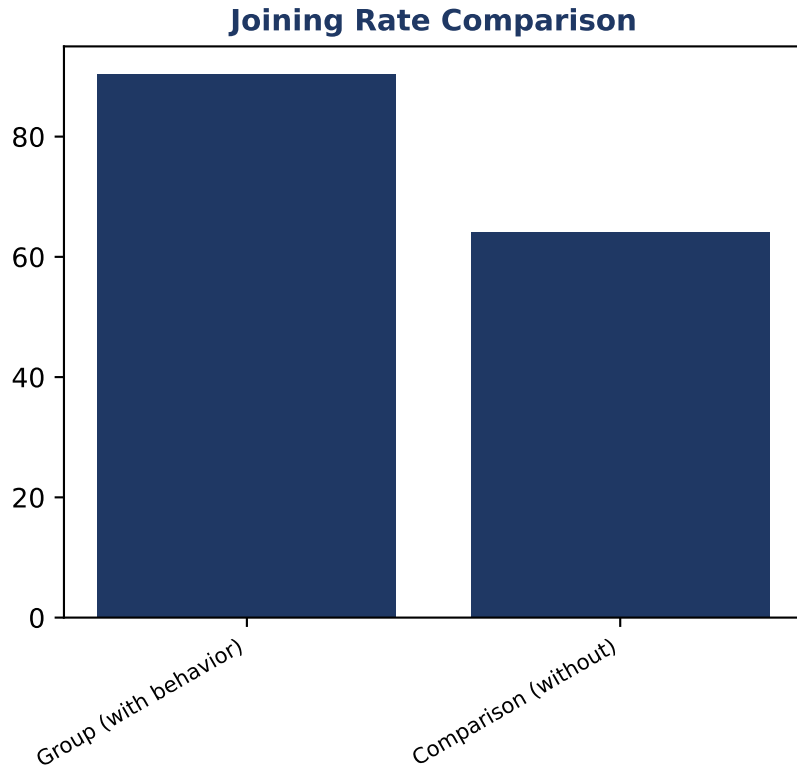

Applications with approved Confirmation Bias evidence showed a 69% joining rate, versus 65% for the comparison group, in the current analytical sample. Association only -- not a causal claim.

Limitation:

Association only, on demonstration data. Does not prove causation.

IDENTITY SIGNALING

Hypothesis HYP-d3d94f9166ab

SUPPORTED

Difference: +26% pts

Sample: n=84 vs n=1590

Effect size: 0.118 (Cramer's V)

CI: not computed for this test

Adjusted p-value: 0.0000

Interpretation:

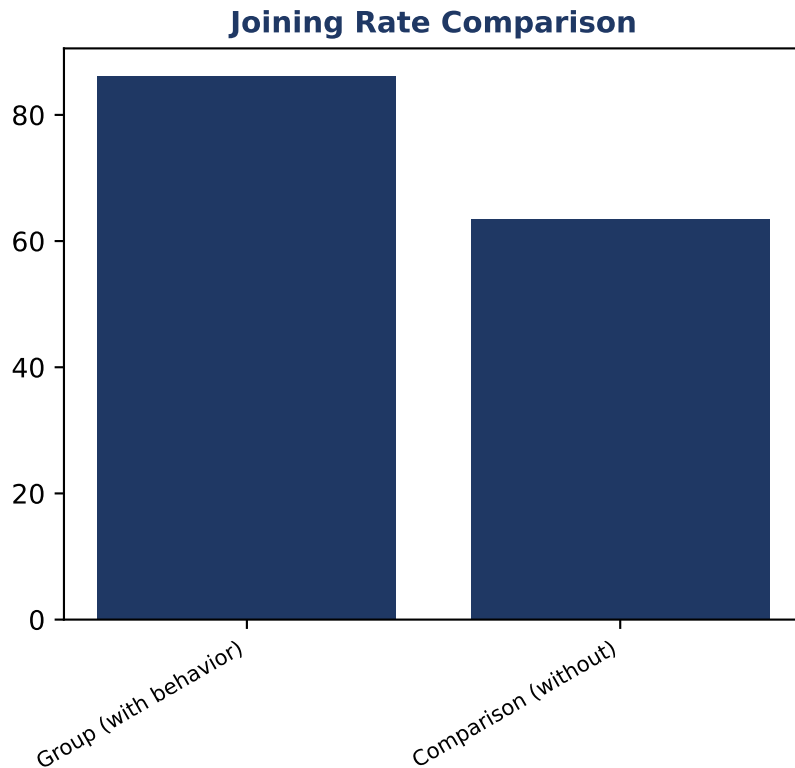

Applications with approved Identity Signaling evidence showed a 90% joining rate, versus 64% for the comparison group, in the current analytical sample. Association only -- not a causal claim.

Limitation:

Association only, on demonstration data. Does not prove causation.

COMMITMENT / CONSISTENCY

Hypothesis HYP-4c8090cc059f

SUPPORTED

Difference: +23% pts

Sample: n=138 vs n=1536

Effect size: 0.129 (Cramer's V)

CI: not computed for this test

Adjusted p-value: 0.0000

Interpretation:

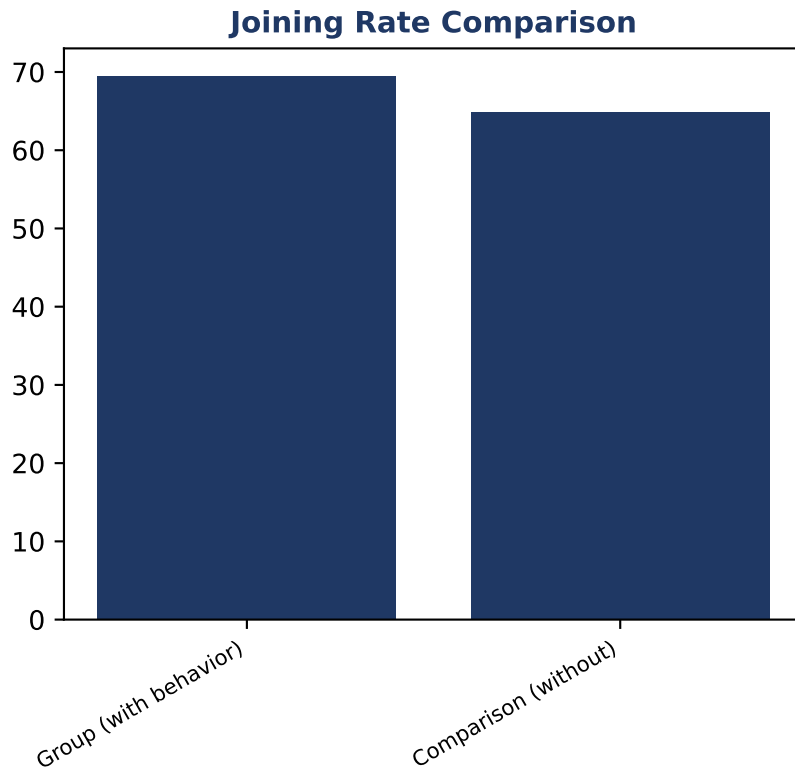

Applications with approved Commitment / Consistency evidence showed a 86% joining rate, versus 64% for the comparison group, in the current analytical sample. Association only -- not a causal claim.

Limitation:

Association only, on demonstration data. Does not prove causation.

GOAL GRADIENT

Hypothesis HYP-f96fc315a6e2

INCONCLUSIVE

Difference: +5% pts

Sample: n=174 vs n=1500

Effect size: 0.028 (Cramer's V)

CI: not computed for this test

Adjusted p-value: 0.3582

Interpretation:

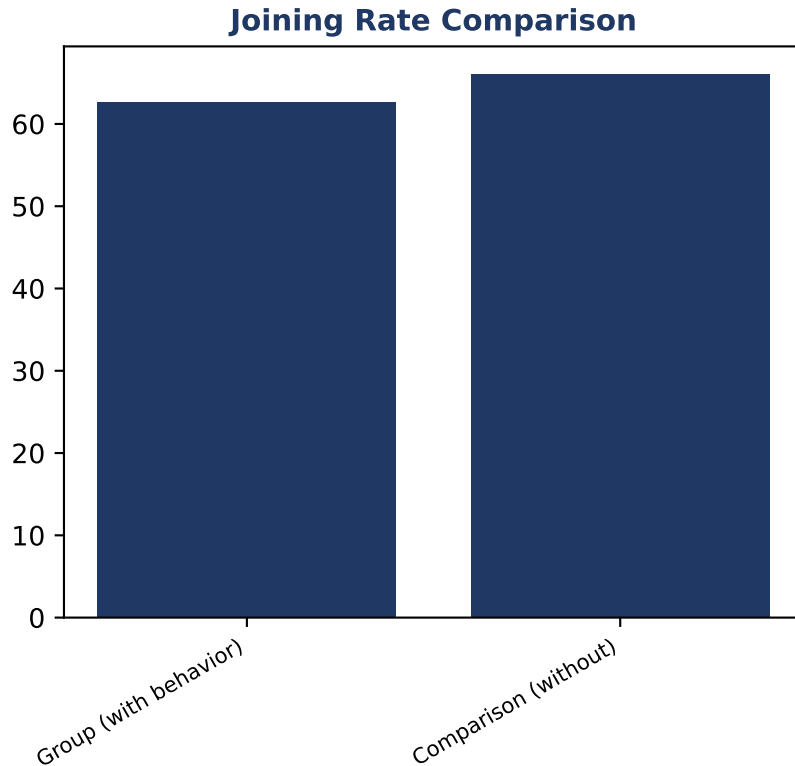

Applications with approved Goal Gradient evidence showed a 70% joining rate, versus 65% for the comparison group, in the current analytical sample. Association only -- not a causal claim.

Limitation:

Association only, on demonstration data. Does not prove causation.

UNCERTAINTY / AMBIGUITY AVERSION

Hypothesis HYP-179c7acccf3e

INCONCLUSIVE

Difference: -4% pts

Sample: n=337 vs n=1337

Effect size: 0.028 (Cramer's V)

CI: not computed for this test

Adjusted p-value: 0.3582

Interpretation:

Applications with approved Uncertainty / Ambiguity Aversion evidence showed a 63% joining rate, versus 66% for the comparison group, in the current analytical sample. Association only -- not a causal claim.

Limitation:

Association only, on demonstration data. Does not prove causation.
