

ABIDS Product Manager Review

Internal -- Not for Client Distribution

Aaryatech Behavioral Joining Intelligence -- ABIDS Demonstration Run

This analysis uses a purpose-built DEMONSTRATION DATASET created to prove the ABIDS method end to end. It is not V Dart's or any client's real historical data.

1. What Data Entered The Engine

Candidate applications, communication logs, stage events, client records, recruiter records, and requisitions -- the full purpose-built demonstration dataset, no external or real client data.

2. Applications Processed

2500 total (1499 discovery, 500 hypothesis_generation, 501 held_out_test -- sealed, untouched).

3. Communications

17351

4. Evidence Items

6749

5. Human-Reviewed Sample Size

275

6. Model-Applied Mapping Count

6474

7. NO_SUPPORTED_MECHANISM Count

1000 -- a valid, expected outcome, never forced into one of the 34 mechanisms.

8. Mechanism Frequency

Mechanism	Count
Friction	1736
Uncertainty / Ambiguity Aversion	985
Status Quo Bias	940
Goal Gradient	548
Reciprocity	364
Confirmation Bias	298
Choice Overload	286
Commitment / Consistency	220
Loss Aversion	199
Identity Signaling	160

9. Scenario Frequency

5749 scenarios (5749 unique).

10. Journey-Stage Distribution

Stage	Count
submitted	1252
background_check	1024
client_interview_1	1018
offer_accepted	743
offer_extended	424
screened	422
client_interview_2	294
onboarding_docs_sent	292
unknown	280

11. Outcome Distribution

1918 behavior x outcome rows across discovery + hypothesis_generation splits only.

12. Hypotheses Generated

14

13. Hypotheses Tested

11

14. Significant / Non-Significant Results

SUPPORTED: 3. WEAK: 2. INCONCLUSIVE: 6. CONTRADICTED: 0.

15. Effect Sizes

Effect sizes (Cramer's V or odds ratio, per test type) are recorded per hypothesis in abids_statistical_results.csv and sheet 09 of the master workbook.

16. Limitations

- Outcome operationalized as binary joined vs. not-joined, a simplification from the full 6-category disposition.
- Unadjusted 2x2 comparisons only -- no covariate control applied in this pass.
- Model-applied mappings (the large majority of evidence) were never individually human-checked.

17. Data Gaps

See sheet 16 of the master workbook for the full list (held-out validation, Intelligence State thresholds, BPI formula, segment stratification, covariate adjustment).

18. What Each ABIDS Report Means

See each report's own Business Question section -- Leakage Map (where), BPI (what to prioritize, pending formula), Uncertainty Matrix (how confident), Scenario Matrix (what it looks like), Journey Map (when), Intervention Matrix (what to try).

19. What Is Methodology Pending

Held-out validation minimum sample rule, Intelligence State thresholds, BPI weighting formula -- all explicitly left pending rather than invented.

20. What Would Change With Real Vdart Data

- Evidence volume and category mix would reflect actual candidate language, not synthetic generation patterns.
- Mechanism frequencies would likely differ substantially -- these numbers are artifacts of the demonstration dataset's design, not a claim about real candidates.
- A larger human-review sample would likely be warranted before trusting model-applied mappings at scale.
- Segment-level (client/job-family/recruiter) stratification would become meaningful with real, varied client accounts.

Product Manager Checklist

Stage	Status
Data ingestion (2,500 applications)	PASS
Evidence extraction	PASS
Human review calibration (275 rows)	PASS
Scaled mechanism mapping with provenance	PASS
Scenario generation	PASS
Application x Behavior bridge	PASS
Behavior x Outcome dataset	PASS -- held-out leakage verified at 0
Hypothesis generation	PASS
Statistical testing	PASS -- 11 of 14 hypotheses tested
Held-out validation	PENDING -- methodology not yet approved, correctly not invented
Intelligence State classification	PENDING -- thresholds not yet validated
BPI numeric scoring	PENDING -- weighting formula not yet validated
Six ABIDS reports generated	PASS
Test suites	PASS (190/190 Behavioral Joining; 240/241 full repo, 1 pre-existing unrelated failure)
Governance safeguards	PASS -- see QA report
