

ABIDS QA & Methodology Report

Demonstration Run -- Safeguards Verified

Aaryatech Behavioral Joining Intelligence -- ABIDS Demonstration Run

This analysis uses a purpose-built DEMONSTRATION DATASET created to prove the ABIDS method end to end. It is not VDart's or any client's real historical data.

Test Results

- Behavioral Joining test suite: 190/190 passed.
- Full repository test suite: 240/241 passed (1 pre-existing, unrelated Market Intelligence Phase 3/4 failure, not caused by or related to this work).

Governance Verification

Check	Result
Frozen 34-mechanism library unchanged	YES -- MD5 hash identical before and after this run
held_out_test leakage into discovery/hypothesis analysis	NONE -- 0 rows verified in behavior_outcome_dataset and bridge table
08_scenario_ground_truth.csv accessed	NO -- confirmed absent from the repository; hard-blocked at the loader level
Individual candidate risk scoring	NONE -- no per-candidate score exists anywhere in this system
Automated candidate rejection	NONE -- no code path advances or rejects any candidate
Psychological diagnosis	NONE -- evidence describes communication patterns only
Causal claims from observational evidence	NONE -- every statistical result labeled association only
Human-reviewed vs. model-applied provenance retained	YES -- on every row from mapping through outcome dataset
Fabricated missing data	NONE -- BPI scores and Intelligence States marked METHODOLOGY_PENDING

Methodology Still Pending (Not Invented)

- Held-out validation minimum sample-size rule.
- Intelligence State (ESTABLISHED/EMERGING/AMBIGUOUS/GAP) numeric thresholds.
- BPI mathematical weighting formula.

Known Limitations Of This Run

- Outcome variable simplified to binary joined/not-joined for testing.
- No covariate adjustment applied (logistic regression confounder checks available but not run this pass).
- No segment-level (job family / client / recruiter) stratification.
- 6474 of 6749 evidence items were never individually human-reviewed.
