

Aaryatech™ Behavioral Priority Index (BPI™)

Report 2 of 6 -- Demonstration Run

Aaryatech Behavioral Joining Intelligence -- ABIDS Demonstration Run

This analysis uses a purpose-built DEMONSTRATION DATASET created to prove the ABIDS method end to end. It is not V Dart's or any client's real historical data.

Business Question

Of everything the behavioral evidence surfaces, what should we actually pay attention to first?

What We Found

- 14 distinct behavioral mechanisms were observed with enough evidence to be worth ranking.
- The descriptive inputs to prioritization -- how often a pattern appears, how many applications it touches, and how strong the statistical evidence is where tested -- are shown below.

What The Evidence Supports

- The table below ranks mechanisms by how many applications they touch, as an interim, descriptive ordering.

What We Do Not Yet Know

- The FINAL numeric BPI score and P1-P5 priority band are marked METHODOLOGY_PENDING in every output for this run. The mathematical weighting that combines prevalence, evidence strength, statistical association, journey-stage importance, and business relevance into one number has not yet been scientifically validated -- so no score was invented for this demonstration.
- Until that methodology is approved, use the descriptive columns (applications affected, evidence strength) as a reasonable proxy for discussion, not a final ranking.

Why This Matters

Leadership cannot act on a dozen findings simultaneously. Once the BPI methodology is validated, this report becomes the single ordered management agenda for where to invest first.

What To Investigate / Test Next

- Review and approve a BPI weighting methodology with Aaryatech's behavioral science lead before this report is used to make resourcing decisions.
- In the meantime, use applications-affected volume (below) as a rough, interim starting point.

Descriptive Ranking Inputs (interim -- not a final priority score)

Mechanism	Applications Affected	Evidence Strength	Priority Band
Uncertainty / Ambiguity Aversion	419	INCONCLUSIVE	METHODOLOGY_PENDING
Friction	339	WEAK	METHODOLOGY_PENDING
Status Quo Bias	247	WEAK	METHODOLOGY_PENDING
Goal Gradient	196	INCONCLUSIVE	METHODOLOGY_PENDING
Reciprocity	174	INCONCLUSIVE	METHODOLOGY_PENDING
Loss Aversion	151	SUPPORTED	METHODOLOGY_PENDING
Commitment / Consistency	145	SUPPORTED	METHODOLOGY_PENDING
Identity Signaling	87	SUPPORTED	METHODOLOGY_PENDING
