

Aaryatech™ Candidate Scenario Matrix

Report 4 of 6 -- Demonstration Run

Aaryatech Behavioral Joining Intelligence -- ABIDS Demonstration Run

This analysis uses a purpose-built DEMONSTRATION DATASET created to prove the ABIDS method end to end. It is not VDart's or any client's real historical data.

Business Question

What real-world situations should a recruiter recognize as manifestations of a behavioral pattern?

What We Found

- 5749 scenarios were generated from approved evidence, each tracing back to exactly one of Aaryatech's frozen 34 behavioral mechanisms -- a scenario is a recognizable situation, never a new mechanism.
- Top patterns by volume: Friction, Uncertainty / Ambiguity Aversion, Status Quo Bias, Goal Gradient, Reciprocity, Confirmation Bias.

What The Evidence Supports

- Each scenario record includes the exact observable evidence, the journey stage it appeared at, and any plausible alternative explanation -- available in full in the master workbook (sheet 13).

What We Do Not Yet Know

- Whether the scenario groupings used here (one per evidence item) would benefit from human curation into broader, named recurring situations -- that curation step has not yet been done.
- 6474 of 6749 evidence items were mapped by the calibrated model without individual human review; treat those scenario entries as demonstration-grade.

Why This Matters

Executives understand behavioral mechanisms intellectually; recruiters work with situations. This matrix is the translation layer between behavioral science and language a recruiter actually uses.

What To Investigate / Test Next

- Have a recruiting manager review a sample of scenario entries for face validity against real conversations they've had.
- Use validated scenarios as the seed content for recruiter training materials.
